Profile

Computing student interested in junior IT support and database work. Practical experience installing and testing a local PHP application in XAMPP, recording results and following technical procedures. Seeking an opportunity to develop troubleshooting and user-support skills through supervised work.

Relevant skills

Windows Command Prompt and XAMPP; database schema import and relational concepts; form validation and workflow testing; test documentation and screenshots; Jira project planning and GitHub documentation. Developing PHP and SQL skills.

Project experience

Fleet Desk | Student project | October 2026

- Installed Fleet Desk in XAMPP, imported its seven-table database and created an administrator through the command line.
- Checked login, vehicle saving and search, duplicate registration rejection, driver assignments and retained assignment history using fictional records.
- Confirmed that reducing DEMO01 from 42,000 to 41,000 miles was rejected and the original mileage remained stored.
- Checked a £150 service and £25.75 repair, then confirmed that archiving retained the £1,096.25 fleet spending total.
- Ran the local automated checks: 70 passes and zero failures using PHP 8.5.12 with an in-memory SQLite test database.

Practical problem solving

Corrected a setup problem by running directory and PHP commands in Command Prompt instead of Windows Run, then confirmed successful sign-in. Project records include screenshots, a Jira backlog and GitHub setup and testing documentation.

Education

FdSc Computing | Elizabeth School of London | Current study
